SLAB LAYING

Tools suggested for Laying

3mm & 10mm trowel

Rubber trowel & Spacers

Device for plate's pulling over and Leveling wedges & clips

SLAB LAYING INSTRUCTIONS

Check the laying substrate. Make sure it is clean, mature, and homogeneous with no cracks.

Apply adhesive onto the back of the slab with a 3mm trowel in one direction only.

Apply adhesive onto the floor substrate at the same time while applying on the slab with a 15mm U-notch or 19mm V-notch trowel in the same direction as the slabs.

Position the slab on the adhesive bed with a sucker frame with adjustment of a minimum of 3mm joint.

Tap the slab from the center to the edges with a rubber trowel to expel air. Make sure air is expelled and there is no bubble between the slab and the substrate.

Complete the laying of the slab with a suitable seslant while keeping a 3mm joint through spacers. The special device of pulling over the slabs can be used for easy laying and spacing.

Level the wedges at each linear meter of the slab.
